Education

Vellore Institute of Technology (VIT), Chennai <i>Bachelor of Science in Computer Science CGPA: 8.99/10</i>	Expected 2027
Sri Matha Matriculation Higher Secondary School <i>Higher Secondary Certificate (HSC) 87%</i>	Class XII

Experience

Engineering Intern Ventura Automations <i>Chennai, India</i>	May 2025 – June 2025
- Contributed to an R&D-based; industrial fabric width measurement system using image processing methodologies. - Worked with Python and hardware-integrated tools for measurement calibration and testing. - Assisted in coding, system testing, and optimization to improve measurement precision. - Helped achieve highly accurate width detection with a maximum error margin of ± 0.05 mm for thick fabrics.	

Projects

Fabric Width Measurement System <i>Python · OOP · Data Structures · Hardware Integration</i>
- Developed an industrial fabric width measurement system capable of precise real-time measurements. - Implemented IR-light-based methodologies and calibration logic to improve detection accuracy. - Achieved measurement precision with an error margin of approximately ± 0.05 mm for thicker fabrics. - Collaborated in a team-oriented R&D; environment involving testing and calibration workflows.
Deepfake Detection System in Cross-Dataset Environments <i>Python · Hadoop · Spark MLlib · Ubuntu · OOP</i>
- Built a deepfake image detection system trained on CelebDF and FaceForensics++ datasets. - Implemented Logistic Regression models for cross-dataset classification and analysis. - Achieved approximately 94% detection accuracy during evaluation. - Utilised distributed computing and big-data frameworks for scalable processing.
YouTube Metrics Analytics Model <i>Python · Machine Learning · Data Structures · Data Analytics</i>
- Developed a machine learning-based analytics model to study factors influencing YouTube video engagement. - Analysed features including views, likes, dislikes, comments, like ratio, comment ratio, and engagement score. - Implemented Linear Regression, Multiple Linear Regression, Random Forest Regressor, and XGBoost Regressor. - Identified correlations between engagement metrics and audience interaction trends.

Technical Skills

Languages	Python, C++, Java, C, JavaScript, PHP
Core CS	Data Structures & Algorithms, Object-Oriented Programming (OOP)
Web Technologies	HTML, CSS
Databases	MySQL
AI/ML & Data Science	Regression Models, Machine Learning
Tools & Platforms	Hadoop, Linux, Excel, Photoshop
Other	SEO, Data Analysis

Interests

Software Development · Artificial Intelligence & Machine Learning · Data Science
